

TIA-X CONTROL CONSOLE

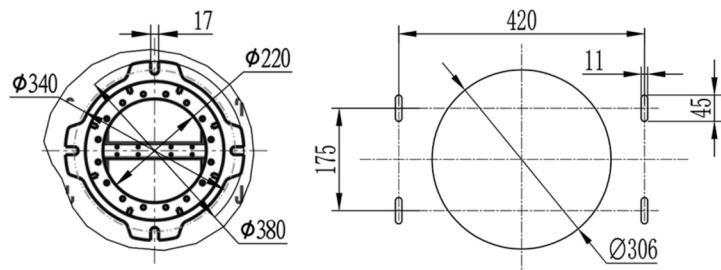

The TIA-X crane console is expertly engineered for AC 50Hz (60Hz) control circuits and supports voltages up to 380V (440V). This console is designed to manage the start, speed regulation, commutation, and braking of motors used in crane machinery and comparable electrical control systems.

Control Box

Constructed from durable steel plate, the control box features a hinged cover with a standard locking mechanism to facilitate easy access for maintenance. The arrangement of the joystick, indicators, and controls is tailored to meet the client's specific requirements.
